

RADPAD[®] Protection **for Interventional Procedures**

5100

Protect yourself and your team from scatter radiation. The negative effects of scatter radiation are cumulative and can shorten a promising career and cause short and long-term health issues for the busy interventional physician and his or her team. The RADPAD[®] Interventional Specialty Shield provides excellent protection during many types of interventional procedures and is often used as an alternate or auxiliary shield for RADPAD[®] procedure-specific shields. If some of your staff members are working on the other side of the patient table or by the patient's head, the 5100 series shields can provide excellent protection. They provide a comprehensive zone of protection for the head, hands and body.

Available in four levels of radiation protection, as well as in non-absorbent and absorbent fabric coverings, the shield presents multiple options for the physician and team members.

Protect Yourself From Scatter Radiation with a RADPAD[®] Shield For Every Procedure

- Scientifically proven to reduce exposure to scatter radiation from 50% to 95%.
- Available in four different levels of protection.
