

RADPAD[®] Protection for Peripheral Procedures

5110

Protect yourself and your team from scatter radiation. The RADPAD[®] Interventional Peripheral Shield provides excellent protection during any peripheral procedure. The added length of the shield allows the physician to work along the entire length of the limb while fully protected. Also available in non-absorbent fabric covering, most physicians choose the absorbent covering due to the volume of fluids associated with these procedures.

The shield is correctly positioned along the length of the limb, near the area of interest and out of the primary beam. The shield is designed to drape down to the table top to protect the physician from scatter emanating from the side of the patient.

The physician should always position the shield between himself and the primary beam.

Protect Yourself From Scatter Radiation With a RADPAD[®] Shield For Every Procedure

- Scientifically proven to reduce exposure to scatter radiation from 50% to 95%.
- Available in four different levels of protection.
