

RADPAD® Protection *during Fluoroscopic Procedures*

Protect yourself and your team from scatter radiation. Scatter radiation often “escapes” from under the table and from between a traditional table skirt and the patient table surface leaving the physician’s legs, feet, waist, and even hands dangerously exposed to potential long term radiation damage. Clinically proven RADPAD® Table Skirts close these dangerous gaps and reduce scatter radiation exposure by upwards of 80% or more.

RADPAD® Table Skirts are easy to clean with soap and water or standard hospital cleaners. They are custom made to your specific table dimensions to ensure their maximum effectiveness. RADPAD® Table skirts are securely held in place with a maximum strength Velcro® “hook and loop” system, but are easily detached to make repositioning a simple procedure.

RADPAD® Table Skirts are easy to use and extremely effective in reducing scatter radiation exposure.

Protect Yourself From Scatter Radiation With a RADPAD® Shield For Every Procedure

- Scientifically proven to reduce exposure to scatter radiation from 50% to 95%.
- Available in four different levels of protection.
- Lead free; disposable
